

UNIVERSITÀ DI PISA

Summer - Winter Schools 2013

The University of Pisa is one of the oldest in the world and it has been extraordinarily successful in updating its structures and human resources in order to meet the new challenges of international research and education at the highest level. It has an excellent international relation in all areas – not only in natural sciences and mathematics, but also for example in humanities, social sciences, medicine, engineering, agricultural and other applied sciences. It leads important international research and education networks, and incorporates their findings into its programmes. The University of Pisa is committed to promoting quality in all areas of research and teaching, and to making all its programmes available to an increasing number of international students and researchers. The city of Pisa, where our University has always had its roots, offers students and researchers an ideal environment for living, studying and working: Pisa has a pleasant climate, excellent food and world famous cultural and leisure attractions. Both the sea and the mountains are close by, as are the cities, museums, monuments and the beautiful countryside for which Tuscany is rightly celebrated.

The University of Pisa's Summer Schools are academic intensive courses for both European and international students and also for young graduates.

They are characterized by non-conventional teaching formats (lectures, workshops, tutorials, excursions, cultural events, business testimonials, etc.) and a multidisciplinary approach.

They usually last from 3 to 6 weeks and offer an international context with their students and lecturers coming from various parts of the world and giving their lectures in English.

Our Summer Schools grant at least 6 ECTS credits to the participants who successfully pass final exams.

Advances in Cardiovascular Medicine

Carlo Palombo, carlo.palombo@med.unipi.it
